Case Study of a Landform

Use the questions in this booklet to guide your research and assist you in preparing your case study for presentation.

Don’t forget you can make drawings or obtain photographs of your chosen landform.

Draw or insert an image of your chosen landform below.

Name and briefly describe your chosen landform

Researching Your Chosen Landform

Things to consider when researching your landform:
- What did the landform look like in the past?
- Does it have cultural or spiritual significance for Indigenous people?
- Is it a popular tourist site?

Document your findings by including:
- descriptions of the landform including shape and vegetation
- possible causes for the shape of the landform
- descriptions of evidence of human activity
- other notes and sketches.

Describe the area and your chosen landform in the box below.
Don’t forget to include the name of the landform and where it is found.
Evidence of natural processes – sketches, diagrams and information

Evidence of human activity – sketches, diagrams and information
Your chosen landform may have evidence of the natural processes of weathering and erosion.

Label the diagram to show the differences.
Draw a diagram to show what the landform could have looked like in the distant past.

Draw a diagram to show what your landform looks like today.
Show the weathering and erosion currently at work. Label the diagram.
Your chosen landform is probably still changing

Draw a diagram to predict how the landform might look 100 years into the future.

Your chosen landform may show the impact of human activity.

Describe any evidence of human impact to the landform

Explain how you think this impact occurred.
Think of strategies that could be put into place to reduce further damage to the landform and the surrounding area.

Describe your strategies.

Add any further information about this landform that you think is relevant. Use this information to guide your presentation.
